Call for papers: Regional industrialization and integration

Now accepting papers for Trade and Industrial Policy Strategies (TIPS) annual forum. Papers on industrial policy, value chains, regional integration, minerals and beneficiation will be considered.

Request for research proposals - Discrimination and affirmative action

UNU-WIDER is assembling a journal special issue focused on the discussion on discrimination against marginalized groups and policies implemented to mitigate the effects of discrimination.

Request for research proposals - The political economy of clean energy transitions

UNU-WIDER and the Joint Institute for Strategic Energy Analysis (JISEA) at the National Renewable Energy Laboratory (NREL) are collaborating to assemble an edited volume focused on the political economy of clean energy. Papers, presentations, reports, articles, and videos available on these event websites:

WIDER Annual Lecture 18

January 2015

From the Editor’s Desk

Tony Addison

We are now into 2015, and the year is already gathering speed. 2015 is of course the 70th anniversary of the United Nations, and a major year in global development with the conclusion of the MDG process, and the start of a new chapter with the SDGs. For UNU-WIDER it is the year of our 30th anniversary. Amid all the celebration though, we have the continuing Ebola crisis in West Africa, the upcoming Paris climate conference (2014 being the world’s hottest year on record), and conflict taking new and deadly forms in Iraq, Nigeria, and Syria. Full article

In 2015 UNU-WIDER is celebrating its 30th anniversary. In this picture from the archives we see Professor Amartya Sen and Dr Jean Drèze presenting their book on Hunger and Public Action at the UNU-WIDER symposium on the same topic, held in July 1990.

UNU-WIDER @ 30

Finn Tarp & Tony Addison

2015 marks the 30th anniversary of UNU-WIDER. The Institute opened its doors in 1985. It has been quite a ride ever since. We have had thousands of economists and other social scientists through those Helsinki doors since 1985. Not only some of the most famous figures in the business, but many younger early-career economists—who have often gone on to have a big impact on research and policy. Our engagement with the developing world has been a constant, and it has been a real pleasure to dialogue with such a variety of research and practice from across
The WIDER Annual Lecture 18 was delivered on 18 November 2014 at the UN Headquarters in New York. The lecture focused on the topic of structural transformation, especially within the framework of the post-2015 development agenda. It was given by Professor Emeritus C. Peter Timmer of Harvard University.

**Open access special issue: Aid and institution-building in fragile states: Findings from comparative cases**

Global food price hikes during 2007 and 2008 resulted in a sharp rise in staple food prices in Bangladesh, which in turn led to a significant rise in the number of households falling below the poverty line. On the political front, Bangladesh was run by an unelected and undemocratic 'civil' caretaker government, backed by the military, which remained in power until the end of 2008 and undertook several steps to contain price hikes. Some of these policies and programmes were effective, and some were not. Full article

**Out of the poverty trap through higher aspirations?**

*Jukka Pirtilä*

Why does a mother from a poor African village not send her daughter to school, but instead marries her off to an old man as a second or third wife? This way poverty is inherited from parent to child. Or why does a boy from a remote village in a developed country, such as Finland, drop out from school and stay unmarried for the rest of his life in the declining countryside? How could an economist contribute to answering these questions? Full article

**RESEARCH ANGLE**

**Food security in Bangladesh**

Over the last 30 years the International Labour Organization (ILO) has actively pursued women’s economic empowerment projects, seeking to raise global awareness of
Why and how some states transition successfully from fragile to more robust—and some do not—are both topical and age-old questions. This volume of The ANNALS addresses these questions with particular attention to the role of foreign aid, offering new traction on theory development on state-building through the use of comparative analysis. Contributions cover selected major cases of aid-supported state-building from the end of the Second World War to the present. Collectively, they highlight the potential for external assistance both to stimulate change and to alter incentives toward institution-building in fragile states. They also show the limits of external assistance by emphasizing the decisive influence of domestic institutional legacies and political dynamics. An introductory article frames the issues addressed in the volume and draws out key findings relevant to current public debates, including the limits to aid, the influence of historical state strength, institutional change through colonial and postcolonial interventions, and political economy incentives to maintain state weakness.

Open access special issue: Aiding government effectiveness in developing countries

This special issue examines recent efforts by donors to meet the multiple goals of improving governance in a manner that ensures local ownership and harmonization with national development objectives, focusing on governance constraints related to improved service delivery and more efficient, transparent public administrations. Particular attention is given to women’s positive contributions to society and improve their welfare. A review of the ILO’s interventions shows that targeting women directly and specifically, engaging and coordinating actively with local institutions to raise awareness, strategies for job creation, and programmes that increase social security are all crucial to improve gender equality. Is rising income inequality inevitable?

Anthony Atkinson in a 1999 issue of WIDERAngle
policing, economic regulation, civic education, decentralization, civil service reform, and taxation.

**Book: Food Price Policy in an Era of Market Instability: A Political Economy Analysis**

This book presents results from political economy studies of food price policy in 14 developing countries as well as the United States and the European Union. While there is ample description of the nature, content, and causes of food price fluctuations during the last five to seven years, very little is known about the processes that led to policy responses or the relative power and behaviour of the participating stakeholder groups. Understanding how and why governments responded as they did is important to enhance the existing knowledge of the political economy of food price policy and to assist governments in their policy-making as they confront future food price fluctuations.

Journal: Open access special issue Urban Governance and Service Delivery in African
This book looks at case studies from South Africa to China to seek a better understanding of the dynamics behind how elites decide to engage with economic development. Approaches include economic modelling, social surveys, theoretical analysis, and programme evaluation. These different methods explore the relationship between elites and development outcomes from five angles: the participation and reaction of elites to institutional creation and change, how economic changes affect elite formation and circulation, elite perceptions of national welfare, the extent to which state capacity is part of elite self-identity, and how elites interact with non-elites.

All UNU-WIDER books published by Oxford University Press are currently available to WIDERAngle readers at an exclusive 20% discount by clicking here.

New in Paperback: The Role of Elites in Economic Development

Elites have a disproportionate impact on development outcomes. While a country's endowments constitute the deep determinates of growth, the trajectory they follow is shaped by the actions of elites. But what factors affect whether elites use their influence for individual gain or national welfare? To what extent do they see poverty as a problem? And are their actions today constrained by institutions and norms established
in the past? This book looks at case studies from South Africa to China to seek a better understanding of the dynamics behind how elites decide to engage with economic development. Approaches include economic modelling, social surveys, theoretical analysis, and programme evaluation. These different methods explore the relationship between elites and development outcomes from five angles: the participation and reaction of elites to institutional creation and change, how economic changes affect elite formation and circulation, elite perceptions of national welfare, the extent to which state capacity is part of elite self-identity, and how elites interact with non-elites.

Is rising income inequality inevitable?

Anthony Atkinson in a 1999 issue of WIDERAngle
The Transatlantic Consensus sees rising inequality as the product of exogenous, inevitable events with an emphasis on technology and trade - including trade with the developing world. There is nothing to be done about rising market inequality. In this article I have described an alternative story which sees the rise in inequality in market incomes as the product of changing social norms resulting in a shift away from a redistributive pay norm to one where market forces dominate. The fact that the driving force is social in origin - rather than trade or technology - means that there is more scope for political leadership. Full Article
